

concrete is beautiful

## Fire Pit Caution and Care Sheet

Your Solus fire pit is cast in high-performance concrete that is naturally durable and freeze-thaw resistant. The following guidelines will help to ensure that your fire pit provides you with years of enjoyment:

### CAUTIONS:

- **FOR OUTDOOR USE ONLY**
- **Wet lava rock may pop and fly out of fire pit when heated. Use care when lighting the fire pit for the first time or when relighting after rain**
- **Always comply with required minimum clearances to combustibles**
- **Always maintain safe distance from fire**
- **Always supervise children around fire**
- **Never leave fire unattended**
- **Always allow ample cooling time after shut-off, before touching or covering**
  
- **Refer to burner manual (included) for lighting and specific care instructions**

### CARE:

- Solus concrete will react to its environment, and naturally weather and patina beautifully as it ages.
- If you wish your fire pit to maintain its original finish, it must be protected from rain and snow.
- Your fire pit is sealed with a penetrating sealer that provides some resistance to water and staining. It is not water or stain proof. Additional coats of sealer, although not necessary, will help to maintain this degree of protection.
- If desired, the green buffing pad may be used to remove water marks and some surface staining.
  
- Cover your fire pit when not in use for extended periods of time.
- Always ensure that your fire pit is draining water properly (i.e. drainage is not obstructed by debris).
